

Animesh Chaturvedi

Full-Stack & AI Engineer · Tech Lead

animesh.chaturvedi.1234@gmail.com [+91 88899 82350](tel:+918889982350) [LinkedIn](#) [GitHub](#) [Portfolio](#)

Full-Stack & AI Engineer with 4+ years building and shipping scalable mobile and web products across React Native, Next.js, and Node.js. Led a team of 4 to take a patient-facing app from zero to production on the App Store and Play Store, and built platforms scaling from 0 to 3M users and 810K weekly active users. Architect cloud backends on Google Cloud Run and AWS Lambda and ship production LLM features with Claude and the LangChain.js / LangGraph ecosystem, including 1,500+ clinician-approved AI reports.

EXPERIENCE

Tech Lead · Praan Health

Jun 2025 – Present

- Led a team of 4 engineers to take a patient-facing React Native app from zero to production on the App Store and Play Store (~2K downloads).
- Architected a React Native (Expo) internal app for 250+ care team members — physicians, dieticians, and strength coaches — replacing ad-hoc WhatsApp updates and spreadsheet session trackers; option-driven inputs auto-generate an AI patient summary that syncs in real time to the patient app, cutting update time ~50% while enforcing consistent, quality-controlled messaging.
- Built two clinician-approved LLM report pipelines with Claude: a health-risk assessment scoring users across categories such as metabolic and musculoskeletal health (~1,000 generated), and a program-graduation summary synthesizing multidisciplinary session notes, VALD functional-test data, and pre/post lab results (~500 generated).
- Architected a Google Cloud Run proxy decoupling mobile clients from third-party clinical APIs, enabling secure, vendor-agnostic integrations with LabStack (lab-test aggregator) and Eka Care (clinic EMR) for lab orders and in-clinic appointment booking.
- Integrated live health-device data — CGM continuous glucose monitoring (live, 50+ active users) and smart-scale support (in progress) — for real-time patient metric tracking.
- Built a React admin platform for care-team oversight and protocol management, plus a health-pass redemption platform for services and partner discounts.

Senior Software Engineer (Contract) · Featurely.AI

Jan 2025 – Apr 2025

- Engineered core features of an AI usability-testing platform where LLM-driven agents simulate end-user personas navigating a website or design to complete tasks, surfacing real-user-like feedback and shortening product feedback loops.
- Designed multi-agent LLM workflows in LangGraph that plan a persona, execute tasks step by step, and self-critique results, adding structured-output guardrails to keep simulated sessions reliable at scale.
- Owned UI/UX and front-end architecture, and improved agent output quality via a feedback-grounded refinement loop — benchmarking LLM responses against real user feedback and iterating on prompts with LangChain.js and LangGraph to reduce hallucinations and off-persona behavior.

Software Engineer · Rep3

Aug 2023 – Dec 2024

- Built a community-campaign platform (Next.js, SCSS) that grew from 0 to 3M users and 810K weekly active users with responsive, cross-browser UIs.
- Built a configurable quest, questionnaire, and rewards engine that let non-technical teams launch engagement campaigns without engineering support, cutting campaign setup from ~1 week to 2 days.
- Owned the client admin front end with per-client branding and theming, cut page load time ~20% (3.5s → 2.8s), and collaborated with backend teams on API design.

Full-Stack Engineer · Lal10

Jun 2022 – Jul 2023

- Migrated a B2B artisan-commerce platform to Next.js with SSR, raising the Chrome Lighthouse score to 96 and helping keep Lal10 in the top 5 for category search results.
- Built AWS Lambda APIs integrating ZOHO CRM/ERP for order and inventory synchronization and Algolia to power product search.
- Developed React Native screens for inquiry and data-flow management across the mobile app.

PROJECTS

Adhikar.ai · Personal project

Aug 2023 – Dec 2023

- Conducted user research with 30+ lawyers to identify real legal-research workflow needs and shape platform functionality.
- Developed a Node.js scraper aggregating 700+ Indian Supreme Court judgments into a structured, searchable corpus.
- Implemented a RAG pipeline embedding the corpus into a Pinecone vector store and retrieving relevant passages per query, so an OpenAI-powered chatbot answered case questions grounded in source law rather than model priors.

SKILLS

Languages	JavaScript (ES6+), TypeScript
Frontend	React, React Native, Next.js, Redux, TailwindCSS, SCSS, HTML5, CSS3
Backend	Node.js, Express.js, REST APIs, GraphQL, Microservices, Real-time Sync, Authentication
Cloud & Data	Google Cloud (Cloud Run, Cloud Functions, Firebase), AWS (Lambda, S3, CloudFront), MongoDB, SQL
AI / LLM	Claude API, OpenAI API, LangChain.js, LangGraph, RAG, Pinecone, Prompt Engineering
Testing & Tooling	Jest, React Testing Library, Git, Docker, CI/CD, Postman, Jira, Agile/Scrum

EDUCATION

Integrated B.Tech + M.Tech, Computer Science · Jaypee Institute of Information Technology

2017 – 2022 · GPA 7.0/10
